ClutchTunes is an Android application that offers unique features to provide an interactive experience of sharing music with friends. While incorporating YouTube, users are able to search and listen to any song in a party based on their GPS coordinates while having the power to influence the playlist by liking or disliking songs in a queue. ClutchTunes is about to bridge the gap between DJ's and party attendees.

Host Phone
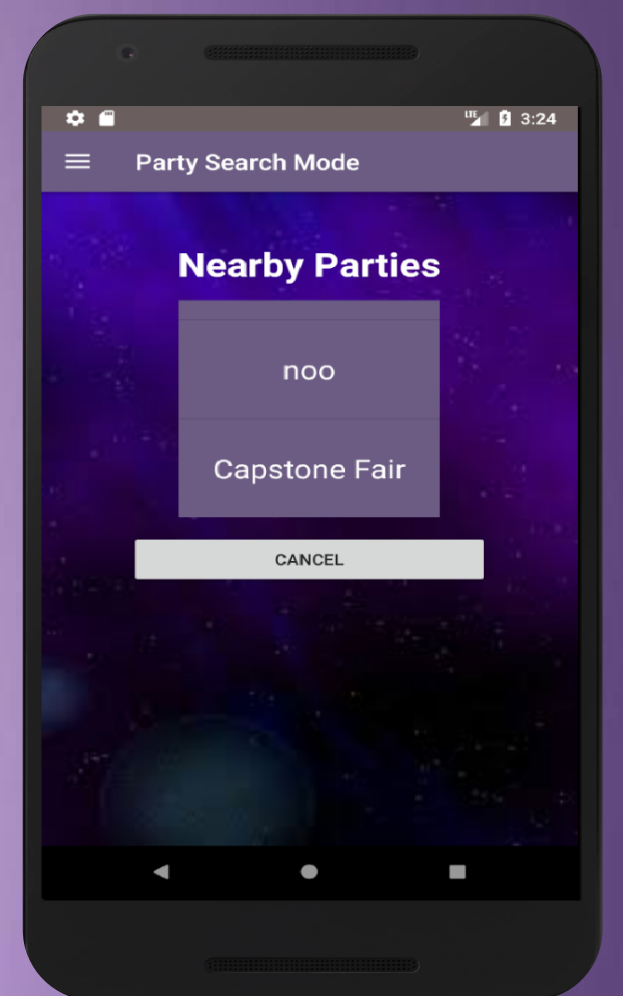

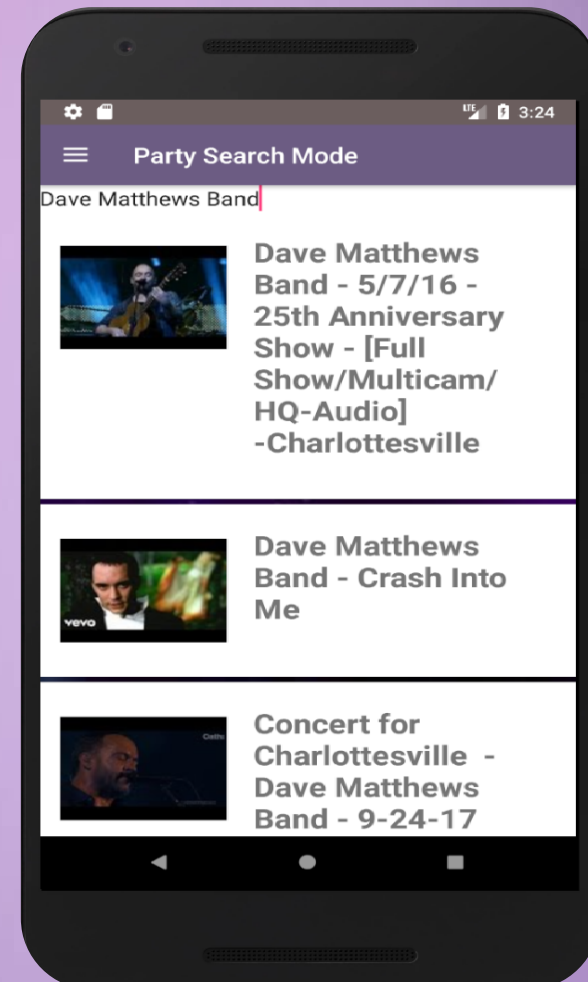

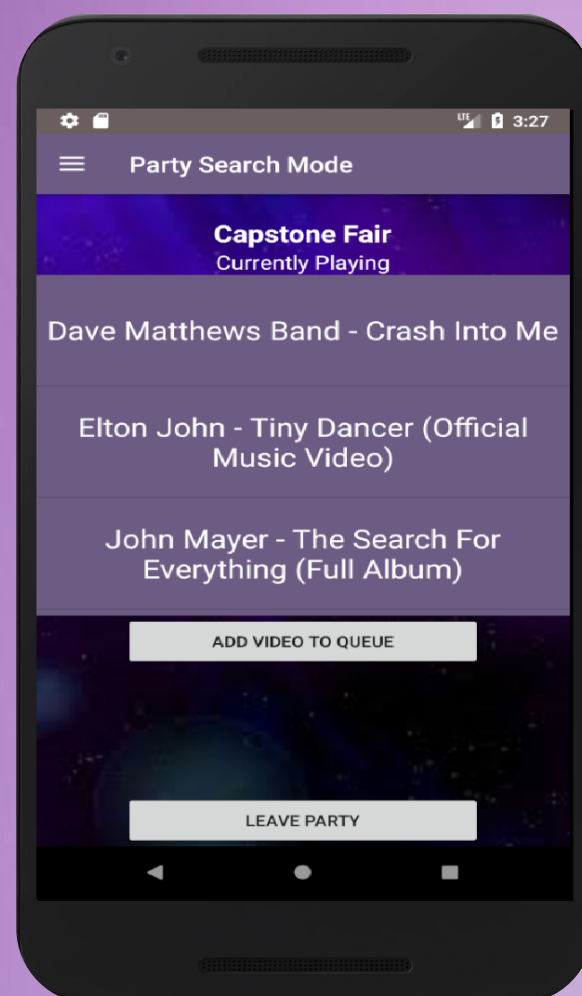

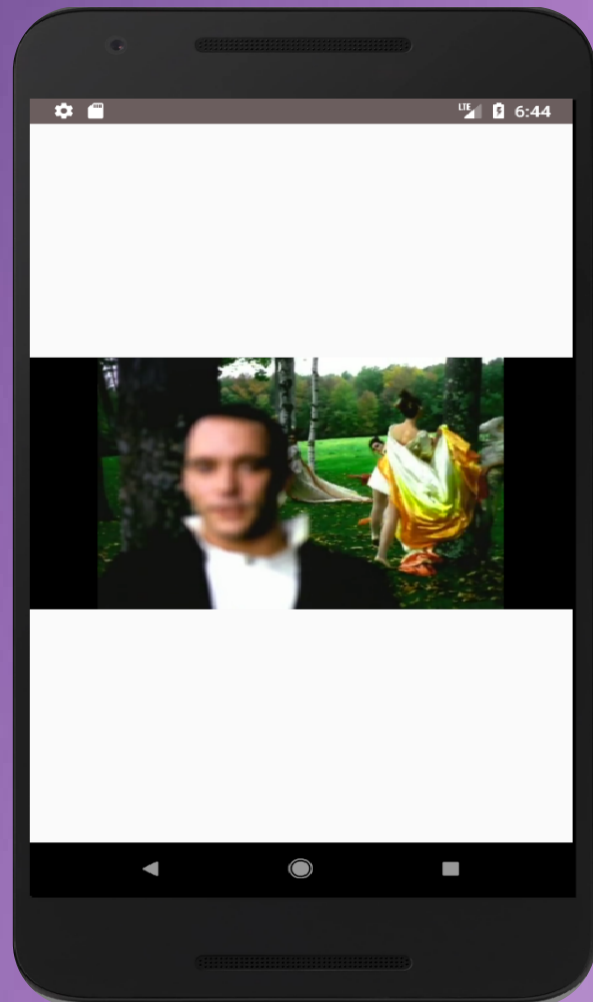

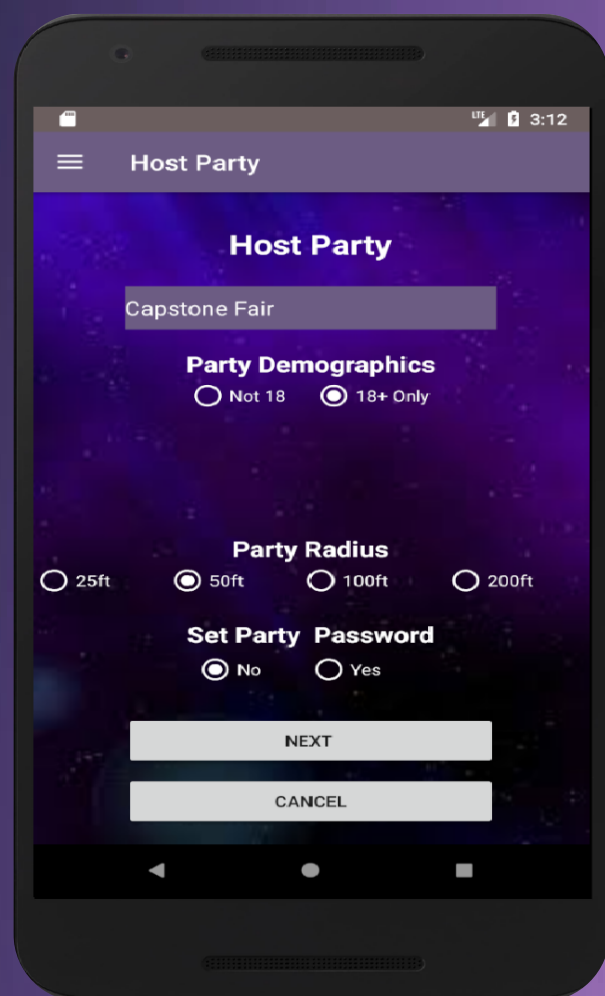

Attendee Phone

As a host, the music video will be displayed during the entirety of the party until it is concluded. Host features include:

Create Party
Choose Demographics of Party
Choose Party Radius
Create With or Without Party Password
Display Video
End Party
Edit Profile

As an attendee, the user can connect to the host's party based on their GPS coordinates and has the ability to impact which song plays next. Attendee features include:

Join Party
Add Videos During Party
Leave Party
Party Search Mode
Like, Dislike, Love Songs on Q
Realtime Playlist Updates
Loved Songs Save to Profile
Edit Profile
